Art Unit: 3765

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-18 and 47, drawn to a method of controlling bow and skew of a backing material fed through tufting machines, classified in class 112, subclass 475.23.
- II. Claims 19-46, drawn to a system for controlling bow and skew of a backing material fed through a tufting machine utilizing a detection device and a controller coupled to the detection device, classified in class 112, subclass 80.23.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process as claimed can be practiced by hand. In particular the process of claims 1 and 47 can be carried out by visually detecting a weft yarn marker and manually aligning the detected weft yarn marker with respect to a mechanical guide element.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
